<https://github.com/sikar16>

TECHNICAL SKILLS:

Front-End: HTML5, CSS3, Bootstrap, Tailwind CSS, JavaScript, jQuery, React, Next.js, UI/UX Design Principles, Responsive Design, Cross-Browser Compatibility

Back-End: Node.js, Express.js, MySQL, PostgreSQL, RESTful APIs

Version Control: Git, GitHub

Design Tools: Figma

Other Skills/ Tools: ChromaDB, AI & AI Agents, Ollama, Agile Development

LANGUAGES:

English (Intermediate),

Amharic(Native)

STRENGTHS

Eager to Learn New Skills:

As a person starting out, I am constantly seeking new ways to grow and expand my skill set.

Not Afraid of Failure:

A strong believer in the mantra that we learn from our mistakes.

Time Management

I always set aside time to plan my week and distribute the workload by days to meet deadlines while maintaining my well-being.

Collaborative:

Playing on my college's hockey team taught me everything about being a team player.

PROFESSIONAL SUMMARY:

I am a Software Engineering graduate from Jimma University, Ethiopia, with a 3.7 GPA, and a strong passion for front-end development and growing expertise in full-stack web and mobile technologies. I am proficient in HTML, CSS, JavaScript, jQuery, React, Next.js, Bootstrap, Tailwind CSS, Node.js, Express.js, PostgreSQL, MySQL, ChromaDB, Ollama, Flutter, Dart, Git, GitHub, Figma, C++, and Java.

Through academic, personal, and internship projects, I have gained practical experience in building responsive and interactive web applications focusing on usability, performance, and accessibility, integrating back-end systems for full-stack functionality, and developing cross-platform mobile applications using Flutter.

I have developed real-world projects including an Inventory Management and Material Request System, an AI-powered Company Knowledge Assistant using ChromaDB and Ollama, an SMS Management System integrated with AfroSMS, an AI-based Performance Report Generator, and a cross-platform mobile application for Ethio-Smart ServiceLink — an AI-powered service marketplace platform — built using Flutter with BLoC state management and Firebase Cloud Messaging integration, demonstrating my ability to combine AI, databases, front-end, and mobile technologies to create scalable, user-focused applications.

Additionally, I have enhanced my front-end skills by cloning complex websites such as Apple and Netflix, improving my ability to replicate sophisticated designs and interactive features. I am an effective communicator, problem solver, and collaborative team player, eager to continue growing as a developer and contribute to innovative and impactful software solutions.

EDUCATIONS

Bachelor of Science in Software Engineering

Jimma University, Ethiopia

May 2022 – June 2026

Courses: Requirement Engineering, Software Architecture Design, Software Design Principles, Database Design and Management, Web Development, Other

EXPERIENCE:

Infant Immunization Monitoring System

Role: Front-End Development

Responsibilities:

- Developed a comprehensive immunization monitoring system.
- Built a responsive web application using React and Tailwind CSS.
- Collected requirements, designed the UI, and implemented front-end components.
- Integrated front-end with back-end services using Express and MySQL.
- Ensured cross-browser compatibility and responsiveness.
- Created and maintained detailed project documentation.

Sikar Yosef

5th year Software Engineer student

The Prodigy Internship

Role: Front-End Development

Responsibilities:

- Developed responsive web applications using React and Tailwind CSS.
- Designed and implemented front-end UI components.
- Ensured cross-browser compatibility and mobile responsiveness.
- Optimized front-end performance and user experience.

BlueSpark Business and Technology Internship

Role: Full Stack Developer

Project: Inventory Management and Material Request System

Responsibilities:

- Led the development and maintenance of a full-stack web application for inventory management and material requests, handling both front-end and back-end using React, Node.js, and Express.
- Designed and implemented intuitive front-end UI components, ensuring a user-friendly experience.
- Integrated a MySQL database for tracking inventory and processing material requests.
- Managed the entire front-to-back integration, ensuring smooth interaction between the UI and server-side logic.
- Implemented authentication and role-based access control for secure user operations.
- Focused on system scalability, performance optimization, and cross-browser compatibility.
- Handled code reviews, debugging, and version control using Git throughout the project.

iCog Assistant (AI Knowledge Assistant System)

Role: Full Stack Developer

Project: AI-powered Company Knowledge Assistant

Responsibilities:

- Developed an intelligent assistant platform that allows new employees to interact with company documentation through natural language queries.
- Designed a system where company policy and onboarding documents are uploaded and stored in a ChromaDB vector database for semantic search and context retrieval.
- Implemented a user authentication system allowing employees to sign up, log in, and manage their own sessions securely.
- Integrated Next.js for the front-end and API handling, PostgreSQL for user and session data management, and ChromaDB for vectorized document storage.
- Utilized Ollama to generate high-quality, context-aware responses based on user questions and document similarity searches.
- Built a session management feature that records user queries and corresponding AI responses, allowing users to revisit past interactions.
- Focused on system reliability, performance, and scalability to handle multiple concurrent users efficiently.
- Ensured a smooth user experience with a responsive and intuitive interface powered by modern UI principles.

Sikar Yosef

5th year Software Engineer student

SMS Management System

Role: Front-End Developer

Project: Bulk and Individual SMS Communication Platform

Responsibilities:

- Developed the front-end and integration layer of an SMS management system using Next.js and RTK Query for efficient state management and API communication.
- Implemented user authentication features including secure sign-up and sign-in workflows.
- Designed and built intuitive UI components for both bulk and individual SMS sending, ensuring a seamless user experience.
- Integrated the system with the AfroSMS service provider for real-time message delivery and status tracking.
- Developed a dedicated user dashboard displaying message history, analytics, and usage statistics.
- Implemented an admin panel that enables administrators to manage users, monitor activity, and set SMS sending limits for each account.
- Focused on front-end responsiveness, performance optimization, and clean UI design for usability across devices.
- Collaborated with the backend team to ensure smooth integration and data synchronization across all modules.

Performance Report Generator

Role: Full Stack Developer

Project: AI-Powered Employee and Department Performance Report System

Responsibilities:

- Developed a performance report generation system that automatically creates structured reports for each user and department based on company-defined formats.
- Implemented the project using React.js for the front-end and Node.js for the backend, ensuring seamless data flow and efficient performance.
- Integrated Ollama AI to process company report format prompts and generate well-structured, human-like performance reports.
- Designed functionality to allow users to select specific employees or departments and define a time interval to generate detailed reports.
- The AI analyzes each task within the selected period — including descriptions, challenges, and learning outcomes — and reformats them into professional company-standard reports.
- Used PostgreSQL to store user data, department details, tasks, and generated reports securely.
- Focused on building a user-friendly interface for administrators and managers to easily navigate, select data, and generate reports instantly.
- Ensured system scalability, accuracy, and reliability in AI-driven report generation and data handling.

Ethio-Smart ServiceLink

Role: Mobile Application Developer

Project: It is an AI-powered web and mobile platform designed to connect clients with verified skilled service providers across Ethiopia think electricians, plumbers, tutors, cleaners, and other informal workers who currently rely on word-of-mouth and Telegram groups to find work.

Responsibilities:

- Developed a cross-platform mobile application using Flutter for the Ethio-Smart ServiceLink platform, enabling clients and taskers to access core services seamlessly on both Android and iOS devices.
- Implemented user registration, secure login, and role-based navigation for Client and Tasker roles, ensuring each user type accesses only their authorized features.
- Built the complete service request workflow on mobile, allowing clients to submit detailed requests with task description, location, schedule, and budget, and enabling taskers to accept or reject incoming requests in real time.
- Integrated Firebase Cloud Messaging (FCM) to deliver real-time push notifications for new service requests, booking status updates, payment confirmations, and schedule changes.
- Connected the mobile application to the NestJS RESTful backend API, handling all data exchange for authentication, service management, smart matching results, and booking lifecycle operations.
- Implemented the BLoC state management pattern to maintain a clean separation between business logic and UI components, improving code maintainability and scalability.
- Used Shared Preferences for local storage, persisting session tokens and user preferences to support smooth offline access and faster app startup.
- Translated Figma UI prototypes into a responsive and intuitive mobile interface, ensuring a consistent and user-friendly experience across different screen sizes and device types.
- Conducted unit testing using the Flutter Test Framework on Android Emulators and physical devices, and performed compatibility testing across both Android and iOS platforms to ensure stable cross-platform performance.
- Collaborated in integration testing to verify seamless communication between the mobile application, backend API, and Firebase notification services throughout the full service delivery workflow.
